

Applications of 100G 400G Optical Modules

Overview

Internet companies and cloud service providers (CSPs) are upgrading their data center network infrastructure from 100G to 400G to meet higher bandwidth demands and lower latency requirements. Mainly used for core switching within data centers and Data Center Interconnect (DCI). 400G optical modules are being deployed to power next-generation high-performance networks across cloud. At the heart of this evolution are 400G Coherent Optics, which integrate optical and electrical components to enable high-speed, long-reach communication. Compared to earlier 100G or 200G systems, 400G solutions offer improved spectral efficiency, greater data capacity, and enhanced scalability. These challenges are forcing innovation to happen at all levels, including pluggable modules. But pluggable modules still. 400G Optical Modules Explained: SR4 Vs.
