

Can a Class I electrical distribution box be used on a construction site

Overview

At a work or construction site where there is no fixed connection (e. distribution box), Class I lamps may only be used in a permanent installation, mounted above 2,5 metres (out of reach) e. This section sets forth requirements for electric equipment and wiring in locations which are classified depending on the properties of the flammable vapors, liquids or gases, or combustible dusts or fibers which may be present therein and the likelihood that a flammable or combustible. This guidance is aimed at those responsible for planning and subsequent management, and those who control the installation and use of electrical systems and equipment on construction sites. The lamps must be connected to the mains by means of a 3-core connection cable. A construction power distribution box is an essential part of a construction site as it ensures that the power needs of all the equipment and machinery on the site are met.
