

# Can fiber optic cable be used to make network cable

## Overview

The short answer is no - RJ45 connectors are designed for electrical Ethernet signals, while fiber optics transmit light pulses through glass or plastic. However, modern networks often combine both technologies. Fiber optic cables and Ethernet cables are two of the most important data transfer cable standards there are, but with their use cases often crossing paths, and colloquialisms even meaning each name is used interchangeably at times, it's important to know the differences with Fiber Optic Cables vs. This article will give you an overview of the use cases for fiber-optic networking, some of the terms used in fiber networking, and suggestions for setting up a fiber network. Such wired transmission methods extend connectivity over long distances up to 200 kilometres (120 mi), support higher bitrates and provide far greater immunity from. While fiber optic cables have advantages in transmission speed and distance, LAN cables still have their place in various applications due to their low cost, ease of use, and ability to transmit both data and power. Ethernet runs on a variety of media:.
