

Copper plate for distribution box

Overview

The copper coil strip or sheet for distribution boxes is used to install the copper between the box and the wall. It consists of a single layer of copper with thick threads running through it, which is then covered in plastic covers to protect against damage. Compare over 30 copper, brass, and bronze alloys to find the right material for you—all with material certificates for traceability. Better wear resistance than copper and brass—all with material certificates for traceability Cut into custom shapes to align, space, and level components on dies. Why choose tinned pressed riveted copper bars as power distribution connections?

In industrial, commercial and civil power systems, distribution box and distribution cabinet It is a key hub for power distribution and control. All sizes listed are in inches, unless otherwise noted. Copper plate is available in alloys: C10100, C10200, C11000, C17510, C18000, C18200. Our premium Copper Bar selection is available in Alloy 102 and 110, catering to a wide range of industrial and electrical applications. We provide square, full round and radius-edged bars, along with customizable trapezoidal and special shape extrusions to meet your exact specifications. Available. Plastic Electrical Box, also known as a consumer control unit or electricity control unit.
