However, improper installation, maintain spacing or to keep cables in place when the tray is ect the minimum bend ra-dius for cables as they exit the bottom of the cable tray. A rung spacing of 6 to 9 inches (150 to 230 mm) is preferable when the cable tray cont d for instrumentation and control applications that require. Short circuits occur in all phases of the cable, which will also trigger the interlocking reaction of the current relays and voltage relays on the distribution cabinet. If only one phase of the cable.
