

Distance requirements between distribution boxes and primary distribution boxes

Overview

The NEC does NOT contain any requirement limiting the distance between pull points. Distribution box and switch box should not exceed 30 meters. Generally, distribution boxes can be divided into three levels of secondary protection, that is, three levels of distribution boxes: general. These guidelines provide you with information on the installation of electricity mains, services, streetlamps, and other parts of our electricity networks. The guidelines also cover the safety aspects of GTC completing works onsite and specify your responsibilities in the delivery of the. This Electricity Specification provides information on various aspects of the approved designs for distribution substations and transforming points operated by Electricity North West Limited, hereinafter referred to as Electricity North West.
