

Distribution box processing time

Overview

For most packages, the processing time at a distribution center is between 24-48 hours. During this time, the package is sorted, scanned, and dispatched to a carrier for delivery. However, this timeframe can vary depending on the factors mentioned above, such as shipping method. The manufacturing process focuses on precisely assembling these elements into a safe, reliable, and long-lasting unit. It all begins with raw materials. Most enclosures are made from sheet steel, galvanized steel (for corrosion resistance), or specially rated plastic composites. Modern distribution and fulfillment centers serve as the operational heart of the supply chain, where goods are received, stored. Packages end up there after a missed delivery attempt, a hold request, or a redirect, and the process is straightforward once you know where to go and what to bring. For LTL and FTL shipments, it can take up to 10 days.
