

# Does the switch need an added fiber optic module

## Overview

Most modern fiber-enabled network switches require an SFP transceiver module featuring a duplex (two strand) multimode OM3 or duplex single mode OS2 connection with LC connectors. Direct attach cables with pre-terminated SFP connections may also be used. All end user devices would also be connected via fiber not copper wire. Fiber optic technology is widely used in networking due to its high-speed data transmission capabilities and long-distance coverage. Unlike fixed RJ45 copper ports, SFP ports support both fiber and copper modules, enabling far longer distances, greater flexibility, and improved scalability in enterprise. An SFP switch uses Small Form-Factor Pluggable (SFP) modules to form a network switch for high-speed connectivity between devices.
