

# Fiber optic interface patch cord calculation

## Overview

The fundamental calculation formula is: Total patch cords = Total number of device ports × Connection factor Where the connection factor depends on the connection method: 2. Scenario-Based Calculations The redundancy factor is typically 0 (no redundancy) or 1 (1:1 redundancy). the list of patch cords that fulfill the requirements and can be made to order. It covers LC connectors, LC patch cables, uniboot designs, armored. Premium-Line 19" Rack mountable fiber optic patch panel is designed for both patching and splicing, accepts whole range of adapters including SC, ST, FC, LC adapters. 2 \* Rear cable entries accommodate cables with diameter below 10mm. More detailed calculation is available in our software. Accurate length fixing is a crucial aspect in planning, with the goal of ensuring efficient, safe, and future-proof implementation of fibre optic patch cords. They are manufactured and tested in compliance with TIA 604 (FOCIS), IEC 61754 and YD/T industry standards.
