

High Temperature Resistant Fiber Optic Tubing for Data Centers

Overview

This high-temperature resistant FEP tube is designed to provide superior protection for fiber optic cables in demanding environments. For use in higher temperature ranges, all optical fibers based on Fused Silica can be optionally equipped with heat-resistant coating materials. The melting point of silica is around 1,700 °C, so a bare optical fiber could. Fujikura's FutureGuide™ series combines decades of innovation and field experience to offer a broad range of optical fibers for various environments and applications. Designed for high bend performance, durability, compactness, and low loss, FutureGuide™ supports the evolving needs of communication. Corning's High Temperature Fibers are designed for applications requiring improved fatigue resistance, high usable strength, and excellent resistance to higher temperatures and hydrogen permeation. The fiber consists of single-mode or multimode core and single or dual coating system, including a.
