

High-precision optical switches from Sweden MEMS

Overview

These MEMS single mode switches are designed to be easily integrated into optical systems. The highly reliable MEMS technology is characterized by a long lifetime, high reliability, and high durability (max 3×10^9 cycles), making these suitable for use as OEM. Sercalo's optical MEMS switches are the best choice for optical switches in Network supervision and optical test and measurement because they exhibit solid state reliability, ultra small insertion loss and long-term stability. Since 1999 Sercalo Microtechnology Ltd. The switch is packaged to. Silex is the leading pure-play MEMS foundry globally, and the first choice for the world's MEMS visionaries. As the world's. We lead the industry in optical switch technology, delivering the lowest insertion loss (0.2 dB), fastest switching speed (10 ns), broadest wavelength range (300–2400 nm), widest fiber compatibility, highest optical power handling (50 W), and space-qualified reliability.
