

How much does it cost to install a 72-core outdoor optical fiber cable

Overview

The total project cost typically ranges from a low near \$2,000 to a high well beyond \$15,000, depending on run length, environment, and required trenching or aerial work. Commercial building installations with 100-200 network drops generally range from \$15,000 to \$30,000. Single-mode fiber costs less per foot than multimode fiber, but it requires more. Homeowners and businesses typically pay for fiber optic cable installation based on distance, conduit needs, and labor. Data aggregated from Q1 2026 contractor invoices across Texas, Ohio, and North Carolina. The installation type you choose and the layout of your property determine the total labor and materials needed for your project. You should account for permit. Indoor/Outdoor Fiber Optic Cable is perfect for connecting the networks of two buildings through the use of an underground conduit, headend termination to a fiber backbone, termination of fiber rack systems, multi-floor deployment where select fibers are used at each floor, or intra-building.
