

How to cut the sheath of a fiber optic cable

Overview

Fiber Optic Strippers: These tools are specifically designed to remove outer jackets and buffer coatings without harming the core fibers. Must be operated with care to avoid crushing. How should optical fiber stripper be used?

There are only three steps: First, strip the outer sheath of the optical fiber with optical fiber strippers; remove the stripped outer sheath of the optical fiber; and finally, cut the exposed aramid fiber with cable-cutting scissors. Heavy Duty Kevlar Scissors can be used to cut. The Jonard JIC-4366 cable sheath stripper and ring tool is ideal for copper cables, tight buffer optical fiber cables, and for slitting figure 8 or webbed cables. The tool is designed with two unique blades, the one located at the tip of the tool is for stripping and slitting cable, and the blade. In this week's video, Ben Hamlitsch shows you how to cut, strip, clean, and cleave your fiber optic cable! He also shares some best practices to follow and additional details you'll want to know along the way! Interested in learning more?

Check out our detailed blog that covers this pro. Standard wire cutters or pliers can severely damage the delicate internal fibers.
