

Industrial Wireless Switches

Overview

Wireless switching devices are used for mobile control points, temporary workstations and for retrofitting existing systems and offer a low-maintenance alternative to conventional switching solutions. No cables - maximum freedom of placement
Maintenance-free operation without battery
Industrial Wireless enables secure and reliable wireless connections for industrial applications. Depending on requirements, use IWLAN or Bluetooth for real-time communication, NearFi for close-proximity applications, or LoRaWAN and Trusted Wireless for great distances. Industry-leading networking, purpose-built for operational technology (OT) Learn how the power of Cisco networking. Wireless switching devices are switching and operating elements that transmit switching commands wirelessly to a wireless receiver. The signal is transmitted via a reliable. The Emerson Wireless 1410 Gateway is a compact, secure solution for remote sites, connecting WirelessHART® networks to host systems. Makes any 2-, 3- or 4-wire HART® device wireless, sending measurement and diagnostic data from hard-to-reach points. Our solutions include industrial Ethernet switches, PoE switches, wireless APs, serial-to-Ethernet converters, 4G/5G routers, etc.
