

Network cabinet shelf load-bearing capacity

Overview

Static load: Max weight when the rack is fixed on the floor. For enterprise racks: 1000–1500 kg. The importance of load capacity, which refers to the maximum weight that a data center cabinet can safely support without compromising its structural integrity or performance, is critical when it comes to ensuring the safety and efficiency of data center operations. Load capacity includes the total. With 100 lbs wall-mounted load capacity and 200 lbs ground-mounted load capacity, you can place multiple devices in the server rack cabinet as needed. High Security: The locked glass door ensures the security of data and equipment. Wall mount rack enclosure server cabinet is ideal for use in public. Most data-center racks are 19-inch EIA-310 frames in 42U–52U height, 600–800 mm width, 1000–1200 mm depth, rated 1000–1500 kg static with front-to-back airflow, bonded to a site earthing bar via a dedicated M8/M10 earth stud; performance depends on correct cable management, blanking, and aisle. Welded joints and high load-bearing capacity handle mission-critical equipment in demanding conditions. Quick installation, secure mounting: Whether you choose a fixed unit, a vented. The flow with no load is 480 m³/h. The connection is made using IEC-320 C13 connectors.
