

North Asia Cable Fireproof Channel Cable Tray

Overview

Fire Rated Cable Trays are built to boost flame retardancy while fitting into tight ceiling spaces. Perforated Type Cable Tray are used to distribute cable and has been designed carefully keeping in mind. A fireproof cable tray is an essential component in modern electrical infrastructure, especially in large commercial buildings, industrial facilities, and high-risk environments. 7 products are successfully used to protect cables in high-rise buildings, industrial buildings, and offshore facilities as well as in sensitive areas, such as hospitals, airports, production. These decisions are relatively simple and can be condensed down to four steps. Material choice T&B channel tray systems are fabricated from a corrosion-resistant metal (low-carbon steel, stainless steel or an aluminum alloy) or from a metal with a corrosion-resistant finish (zinc or epoxy). Channel cable trays have powder coated, hot-galvanized and electro galvanized surface mainly used to support computer cables, communication cables, thermocouple cables and other. Ensure your infrastructure's safety with NewReach Fire Rated Cable Trays that feature the proven FLAMMOTECT-A and DG-CR 0. The innovative solutions offer resistance to fire, creating protective barriers for your cables.
