

ODMADSS optical cable OM5

Overview

OM5 is the first approved as WBMMF (Wide Band Multimode Fiber) is designed to specifically handle high-speed data center applications with using two fibers to transmit from 40GBs up to 100GBs and is powered by shortwave wavelength division multiplexing (SWDM). Corning® ClearCurve® OM5 wide band optical fiber is designed to support Wavelength Division Multiplexing (WDM) operation over 850 – 953 nm wavelengths while offering the same bandwidth specifications at 850 nm as Corning® ClearCurve® OM4 optical fiber. We offer full-service OEM and ODM solutions for fiber optic cables, assemblies, and connectivity products — from design and prototyping to global production and logistics. What makes it more than just the next iteration of OM cable is the new take on multiplexing. In ISO/IEC 11801 and EIA/TIA standards five types of Multimode -. In OM5, wavelengths increase each fiber's capacity by at least a factor of four (there's either a fourfold data-rate increase or a fourfold reduction in the fibers required to achieve a given data rate). The signals are sent down one fiber over four separate operating windows.
