

Optical cable terminal equipment ODF

Overview

ODF (Optical Distribution Frame) optical fiber distribution frame is an optical fiber distribution equipment specially designed for optical fiber communication equipment room. It provides fiber fixing, splicing, termination, patching, and cable management in telecom rooms, data centers. Achieve successful cable management, handle high amounts of fiber cable and add density to fiber frames with the new DCX Optical Distribution Frame (ODF) System which features innovations like flippable cassettes, modular frame design and multiple configuration options. The user optical cable terminal box installed on the wall, its. Optical distribution frames include floor-standing and wall-mounted cabinets that contain 3U shelves with patch adapters and splice trays. ODF cabinets are used for as an ultra high density central cross-connect point in exchange, head end and customer premises distribution areas. It is designed with precision and functionality in mind.
