

Precautions for laying aerial optical cables

Overview

This guide highlights essential precautions including wearing protective gear, disconnecting power sources, handling fiber scraps carefully, avoiding face or eye contact, following regulatory standards, using adequate lighting, and keeping food or beverages away from work areas. 01 This procedure provides general information for the installation of aerial fiber optic cables. The methods described are intended for guideline use only, as it is impossible to cover all the various conditions that may arise during an installation. Aerial fiber installation places optical cable on poles or other supports rather than underground. harness on all bucket trucks and aerial lifts. The charter of the FOA was to promote professionalism in fiber optics through education, certification, and. The practices contained herein are designed as a guide for use by persons having technical skill at their own discretion and risk.
