

# SFP Optical Module Remote Monitoring Type for Field Operations

## Overview

DOM (Digital Optical Monitoring) is an integrated real-time monitoring solution embedded in SFP optical modules. It collects, transmits, and analyzes operational parameters, providing administrators with actionable insights into link performance. SFP (Small Form-factor Pluggable) is a compact, hot-pluggable network interface module used to connect network devices (switches, routers, firewalls) to fiber optic or copper cables. Optical link diagnostics are central to network maintenance, and DOM technology enables. Digital Optical Monitoring (DOM) technology, a key feature of SFP optical modules, provides real-time, comprehensive parameter support for optical link diagnostics, making it indispensable for troubleshooting. The user's attention is called to the possibility that implementation of this specification may require the use of. This document defines an enhanced Digital Diagnostic Monitoring Interface (DDMI) available in Finisar SFP and SFP+ optical transceivers. (Note: the DDMI also applies to legacy GBIC optical transceivers.)
