

What tools are used to strip OPGW optical cables

Overview

Specialized tools like strippers and cleavers are essential for stripping jackets and coatings, revealing the fiber cores. This precision ensures optimal signal transmission. Why Is Cleaning the Fibers Crucial?

With the fibers exposed, cleanliness becomes paramount. The most important types of these cables are OPGW (Optical Power Ground Wire), OPPC (Optical Phase Conductor), ADSS (All-Dielectric Self-Supporting) and SkyWrap. FOS03 Fiber strippers. Joining works a) Preparing of materials, tools and equipment b) Cutting and treatment of OPGW ends c) Fixing OPGW in the pass cable d) Application of thermo-shrinkable tube e) Application of the pre room f) Fixing of the pre room g) Taking out of optical units h) Splicing of optical fibers i). Therefore, specific components and machinery are used for the OPGW cable: pullers, tensioners, anti-twisting counterweights, swivels, pulling grips, pulley-blocks, self-gripping clamps, pulling ropes, pulling cables, etc.
