

Why can a switch be plugged into a fiber optic cable

Overview

Flexibility: They support multiple connection forms, such as copper and fiber optics, to meet various networking requirements. An SFP switch uses Small Form-Factor Pluggable (SFP) modules to form a network switch for high-speed connectivity between devices. This article aims to provide a comprehensive understanding of how network switches are connected to fiber. In addition, fiber cables can transmit data over several kilometers without signal degradation, making them ideal for connecting switches in large campus networks and between different buildings. As they do not emit electromagnetic signals, they're difficult to tap and secure against eavesdropping. Download the Application PDF SFP transceiver. SFP modules insert into these slots and require two strands of fiber, typically duplex. Using multi mode fiber (for runs under 1000 feet) or duplex single mode fiber (for runs over 1000 feet). This is a cost-effective and high performance way to connect network switches.
